Q1. Operators in Python

ANSWER

Operators are special symbols are reserved keywords that carry out mathematical, logical or relational computations on variables and values. There are 4 types of operators

- 1 - Arithmetic Operators (example : +,-,%,x,/,//,**)
- 2 - Assignment and Comparison Operators (example : ==,!=,>,<,>=,<=)
- 3 - Logical Operators (example : and, or, not)
- 4 - Identity and Membership Operators (example : Identity and Membership)

Q2. Operators

ANSWER

/ - normal division (a/b)
// - floor division (a//b)
% - Modulus (a % b)
** - Exponentiation (a**b)

Q3. for and while loop

ANSWER

A for loop does not allow the execution of statements over and over again and also sequentially but while loop allows the execution of set of statements over and over and over again

Q4. range()

ANSWER

range () is used to generate a sequence of numbers
range (5) - generates exactly 5 numbers, starting from 0 to 4
range (1,6) - generates numbers starting from 1 to 5
range (1,10,2) - generates numbers from 1 to 9 but increases by 2 each time (1,3,5,7,9)

Q5. String

ANSWER

String consists of alphabets, numericals, and spaces.
It is also called as Unicode.
It is generally enclosed using single quotes, double quotes or triple quotes.
String is immutable

Q6. String Slice

ANSWER

1.python
2.nothing
3.pto
4.h

Q7. List

ANSWER

It is a built in data structure used to store collections of data.
It is ordered
It is mutable
It is dynamic
List is mutable whereas string is immutable

Q8. List Slice

ANSWER

[30,40,50,60,70]
[50]
[10,30,50,70]
[70,60,50,40,30,20,10]
[40,50,60,70]
